

mediaSERVER

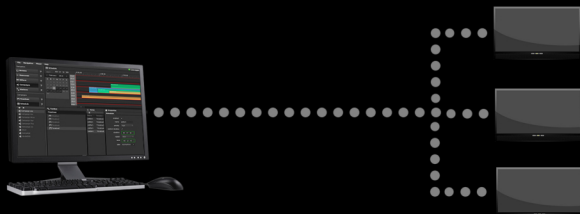

The mediaSERVER is an affordable, self-hosted digital signage server for medium to large sized networks – a robust solution able to run a network of thousands of SignagePlayers. There are no monthly fees to deal with. Simply purchase the USB mediaKEY, plug it to your own server, go through a quick setup, and use the mediaSERVER to start managing your Digital Signage network from anywhere. Your mediaSERVER will provide uninterrupted service to thousands of concurrently connected Digital Signage and Kiosk screens.

It's your network, it's your server

Managing a privately hosted mediaSERVER delivers the level of security and independence from the mediaCLOUD that many companies require. And while the SaaS model is more affordable, nothing beats a privately hosted mediaSERVER when it comes to true ownership and management over your network.

the benefits

- No monthly fees
- Same features as the mediaCLOUD
- Independence from the mediaCLOUD
- Signage management tools
- Manage the mediaSERVER from your trusted domain
- Stream sensitive media over the LAN, VPN & WAN
- Easily schedule downtime and maintenance
- Quarterly software updates and constant support
- RSA Public / Private authentication schemes
- Multi-level user management
- Works within a firewalled environment.

Easy install. Pick any server hardware you like and install in minutes

The mediaSERVER can be installed – using a simple USB mediaKEY – on any PC running Microsoft® Windows 2008 Server. The mediaSERVER is the heart and soul of your signage solution. You can pick any hardware configuration you like. Then, you simply decide how many SignagePlayers you want to control, and purchase that many licenses. If you decide to purchase additional licenses down the line, you simply download those licenses directly onto your mediaKEY – no waiting for any special serial numbers or software keys. Quick & easy...that's the way we like it at MediaSignage.

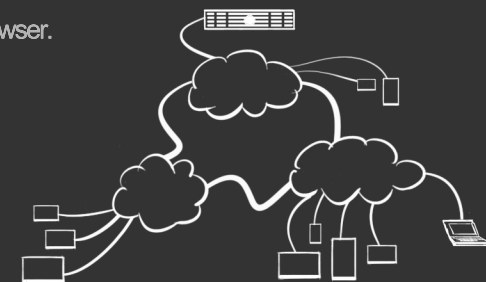

You'll get all the features you love from the mediaCLOUD in a privately hosted server

You'll have full access to the SignagePlayer – Web and Desktop versions – and SignageStudio – Web and Desktop versions – as well as access to the ResellerStudio. But now all the applications will access your privately hosted server for both management and presentation playback.

- Manage an unlimited number of accounts
- Run more than 1000+ SignagePlayers concurrently
- Players are self-contained, "plug and play" installation and setup
- Receive Live mediaSERVER and player updates
- Get direct access to the backend, including database and web services
- Collect and manage server and player statistics
- Works across LAN, VPN, & WAN networks and over the web
- Optimized OS and web services to deliver the best possible throughput

Web management is an integral part of the mediaSERVER. With one single control panel, you can access all of your managed accounts. And when you have to manage hundreds of remote SignagePlayers, that's when the control panel really shines. Do it all...with one single utility.

- Full access to both the ResellerStudio and Admin panel from any Flash powered browser.
- Single point management
- Collect live SignagePlayer stats including socket and polling connection
- Collect live Server stats including logs and reports
- Direct access to all the Windows management tools
- Remote desktop server management

the mediaSERVER – A digital signage solution that won't break your bank account

The mediaSERVER was built first and foremost to serve our mediaCLOUD (SaaS) businesses model. Purchasing the mediaSERVER assures you are getting a product that was designed, from the ground up, to deliver the best user experience to both you and your audience. And to make sure EVERYONE can join the digital signage revolution...we priced the mediaSERVER so it's affordable.
